GSvit documentation 1

GSvit documentation

Here a documentation for [GSvit](#) open source software for FDTD calculations is provided. It can be used for various calculations of electromagnetic field propagation and interaction with different objects (see [features list](#) for a summary). Software can be downloaded at the [Download page](#).

The documentation provided here is a living document, being continuously updated to be compatible with the last stable version of GSvit. See [NEWS](#) for details on features and algorithms changes for a particular version.

We will be happy for your feedback, see [Contacts](#) for details.
